

Making a 3D Christmas Tree using the 14x14 Square Midi Hama Bead Peg Board

6 x yellow (no.03) or gold (no.61)
180 x green (no.10)

To prevent individual beads breaking away from the design:

- ◆ Once you have taken your design off the board, turn it over and cover with greaseproof paper. Iron your tree on the back, paying particular attention to the edges of the design.

and/or

- ◆ Add clear beads next to each bead connected with a single join (as shown in the bottom images). Alternatively add coloured beads as 'baubles' instead of the lower four clear beads.

After ironing place your design under a heavy book to keep it flat.

When cooled, slot your two pieces together.
