

## Generic Jellyfish Craft

1) Paint both sides of a paper bowl (iridescent colours are best).  
NB: If short of time paint only the underside as the inside will only be seen from some angles.

2) When dry, cut in half as shown above.

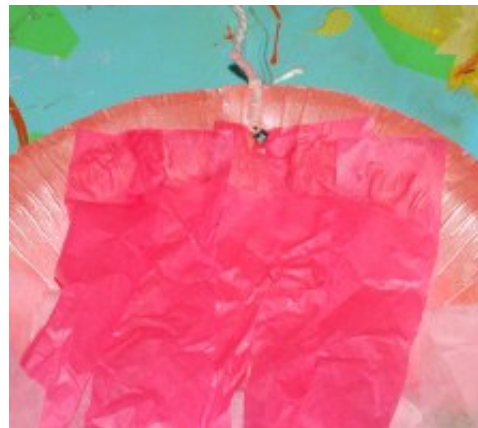

3) Cut long thin strips of tissue paper.

4) Turn each half bowl over (as shown above) and glue your strips along the bottom of each piece.

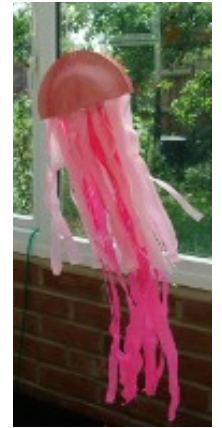

5) Cut longer strips from a different colour piece of tissue paper and glue them to the top of the bowl as shown above.

6) Ask an adult to make a hole in the top of one half of the bowl and attach string or wool.

7) Glue or staple the two halves together.

8) When dry you can hang up your jellyfish or make it 'swim' by running around with it.
