

Template for Making an Owl Finger Puppet

- 1) Cut out the pieces.
- 2) Glue or sew the two body pieces together. If using glue remember to only stick around the sides and top - leave plenty of room for your finger!
- 3) Stick on the tummy and head. (You could use self adhesive felt for these pieces.)
- 4) Stick goggle eyes to the head.
- 5) Draw on the beak.
- 6) Glue on the wings.

Choosing the right glue: You need to use a glue that is suitable for felt (e.g. Copydex, a high tac pva or fabric glue). With most glues you will need to glue both pieces and wait for about 30 seconds before putting them together. This will help prevent the glue from soaking into the felt. DO NOT touch the puppet until it is completely dry. Moving it will usually cause the pieces to unstick.
