

Template for Making an Elephant Finger Puppet

- 1) Cut out all the pieces.
- 2) Carefully glue around the edge of the two body pieces. Push together. Alternatively stitch the pieces together and then turn your puppet inside out.
- 3) Glue the head to the body, leaving the trunk unglued.
- 4) Glue the tusks in place (tucked slightly under the head piece).
- 5) Stick on goggle eyes.
- 6) Leave to completely dry before using the puppet.

Using the correct glue: You need a glue that will stick felt. A tacky pva intended for craftwork should work well. Put glue on the two pieces that will be stuck together and then leave for 30 seconds before putting them together. This will let the glue dry slightly, helping to stop it soaking into the material.
